

RECIPIENT CONTROL OVER ASPECTS
OF INCOMING MESSAGES

Abstract of the Invention

An information system includes a plurality of messaging systems, a data center and a control system. The plurality of messaging systems process respective messages intended for recipients. The data center is in operative communication with the plurality of messaging systems and stores a recipient preference profile associated with each respective recipient. The control system accessing an intended recipient preference profile corresponding to an intended recipient of a message and uses the intended recipient preference profile to process the message.
